

Clean version of the corrected claim 17.

17. (amended) The system of claim 16 wherein the voice recognition means converts a plurality of spoken languages limited to spoken digits.

Clean version of the amended claim 1.

1. (amended) A system for text entry, text editing, and hyperlink navigation, comprising:

- a reduced keyset keystroke sequence;
- a keystroke sequence receiver for receiving the sequence;
- a keystroke sequence parser for parsing the received sequence;
- an input text buffer for receiving the parsed sequence;
- storage means for storing and retrieving user interface display screens;
- a browser for accessing the display screens;
- a video output converter for converting an accessed display screen for display on an ordinary television set;
- the accessed display screen including a hyperlink for option selection and for display screen navigation,
- whereby a user enters a keystroke sequence for entering text, for editing text, for selecting displayed options, and for navigating the user interface display screens.
